WHEELCHAIR CONVERSION

ATC (All Terrain Conversions) driver-side package. The driver's door opens up and over the cab as a canopy, and a single-motor hydraulic lift raises the wheelchair platform to the driving position in 20 to 25 seconds. One remote starts the truck and runs the lift.

Drive from the wheelchair. The factory driver's seat has been removed so the chair locks into the driving position. With hand controls added, the user drives on their own. Pre-owned conversion; the original factory seat is not included.
