F1 EVO ACCELERATOR AND BRAKE

Guidosimplex has been the leader in the mobility equipment industry for over 50 years. Pairing innovative designs with unrivaled technology, Guidosimplex provides stylish and safe mobility solutions.

The F1EVO floor mounted lever is encased in a stylish Italian leather case. The revolutionary design keeps the mechanism enclosed in a stationary case, protecting your legs and leaving you with more options for seat adjustment and comfort. Simply pull back for acceleration and push forward for braking. The F1EVO comes complete with one standard button or five optional buttons for secondary controls. The F1EVO features a brake locking system that holds the brake lever while starting the vehicle and putting it into drive.

DETAILS & DESIGN

The F1EVO is designed to look like a gear shift. It is easy to use and can be adapted to almost any vehicle with minimal modifications. The F1 eliminates encumbrances from underneath the steering wheel by attaching the lever to a dedicated bracket attached to the original anchoring points of the driver's seat. The F1 does not affect your ability to use your original steering wheel adjustment functions (tilt, etc.). Nothing interferes with getting in and out of the vehicle. In fact, the F1 makes your vehicle friendly to ALL drivers in your household – accelerator and brake pedals continue to function normally even with the F1 installed.

NEW HEIGHTS IN SAFETY

Our mission to provide you with controls for life means our products must exceed the highest quality of safety standards. The Push-Pull design of the F1Lever eliminates any possibility to accidentally accelerate and brake at the same time. The construction of the lever consists of smooth beveled edges which decreases the risk of cuts and scraping. The handle is wrapped in soft Italian leather to act as a heat barrier while providing a comfortable grip, reducing the chance of slipping.
